* Colors shown are representative of colors manufactured as accurately as can be produced using the finest methods of printing and reproduction. The final color of the installed joint may vary from the printed sample. Colored grouts, like concrete are a combination of Portland cement and an inert aggregate. It is not uncommon for grout, concrete driveways, or sidewalks to show discoloration, inconsistent color or lighter/darker color than samples. Coverage rates listed above are for straight edge tiles and may vary widely for uneven, wave-edge or cushion-edge tiles. Grout width will be predetermined by any mounted tile when many tiles are used to create a pattern. It is typical to provide additional grout (10% extra) to allow for overages due to jobsite waste. Additional grout should also be supplied to the building owner/homeowner for future use and/or color matching.
